

Overall Work & Contributions Jishan Pathan

A] Angular Toolkit Development & Maintenance

- Delivered development and maintenance across 20+ Angular Toolkit components.
 - Implemented component enhancements, functional improvements and bug fixes across the toolkit.
 - Resolved SonarQube and code-quality issues across multiple components.
 - Performed accessibility testing and remediation to improve component compliance and usability.
 - Made a significant contribution to Angular Toolkit development and maintenance since joining Mastercard.
-

B] React Toolkit Development & Maintenance

- Delivered development and maintenance across 10+ React Toolkit components.
 - Implemented component enhancements, functional improvements and bug fixes.
 - Resolved SonarQube and code-quality issues across React components.
 - Performed accessibility testing and remediation across components.
 - Supported component integration and application compatibility.
-

C] Access Manager Groups (AMG)

- Contributed to AMG from initial application setup through development, testing and deployment.
- Delivered work across key application areas including Landing, Group Details, Create/Duplicate Groups, User Management and Readers.
- Developed and enhanced key user and group management workflows.
- Implemented UI features, component integration, bug fixes and functional enhancements.
- Performed accessibility testing and remediation across the application.
- Created technical documentation supporting features and application functionality.
- Gained end-to-end application delivery exposure, spanning development, configuration, testing and deployment.
- Made a significant contribution to the successful delivery of AMG in collaboration with the team.

D] Access Manager Groups – Automation (Playwright)

- Developed Playwright automation for key AMG application workflows.
 - Built automated coverage for critical user journeys and regression scenarios.
 - Worked across automation setup, configuration, execution and troubleshooting.
 - Investigated and resolved automation failures to improve test reliability.
 - Strengthened AMG's automated regression testing capability.
-

E] Bitbucket → GitHub Application Migration

CCM-UI

- Migrated CCM-UI from Bitbucket to GitHub/Forge, including repository and branch setup.
- Established the GitHub/Forge POC and supporting application configuration.
- Configured required branches, environments and migration-specific changes.
- Validated application build, functionality and maintainability on GitHub.
- Supported deployment and migration-readiness activities.

CCM-BFF

- Migrated CCM-BFF from Bitbucket to GitHub/Forge and established the required repository structure.
- Configured develop, release, ITF and Stage secured/unsecured branches and environments.
- Updated manifests, versions and environment-specific configurations required for the new platform.
- Validated application functionality and deployment readiness following migration.

Angular 13 and Angular 20 Toolkits

- Migrated the Angular 13 application from Bitbucket to GitHub/Forge.
- Established the repository, branch and platform configuration required for GitHub.
- Performed POC and build/application validation after migration.
- Ensured application functionality remained consistent with the previous Bitbucket setup.
- Enabled artifact deployment through the new Forge platform.

React 19 Toolkit

- Migrated the React 19 application from Bitbucket to GitHub/Forge.
- Adopted the BAM Bot-based migration approach for the repository migration.
- Investigated and resolved migration blockers related to repository paths and the new migration methodology.
- Validated the migrated application and addressed issues required for successful migration.

Overall Migration Contribution

- Contributed to the Bitbucket → GitHub/Forge migration across five application areas — CCM-UI, CCM-BFF, Angular 13, Angular 20 and React 19 — covering POC, repository and branch setup, environment configuration, build validation and deployment readiness.
 - Helped establish and validate the applications on the new platform, enabling teams to continue building and deploying applications on GitHub/Forge with functional continuity.
-

F] CCM-UI Development & Maintenance

- Delivered UI enhancements, feature updates and bug fixes across CCM-UI.
 - Supported release, environment configuration and deployment activities.
 - Implemented Stage and ITF Nginx configuration changes.
 - Managed MTF configuration and application version updates.
 - Resolved project-wide SonarQube issues.
 - Contributed to improved application stability, quality and maintainability.
-

G] Common F5 → Application-Specific F5

- Contributed to the transition from common F5 configuration to application-specific F5 configuration.
- Implemented and supported F5 configuration changes across CCM application environments like CCM-UI Stage, ITF and MTF.
- Managed required changes through CRQ requests and Heracles configuration activities.

Attempted MCM Stage and ITF F5 changes, including implementation and validation; the work was subsequently aborted.

Summarized in one liners

1. Angular Toolkit Development & Maintenance
2. React Toolkit Development & Maintenance
3. Access Manager Groups (AMG)
4. Access Manager Groups – Automation (Playwright)
5. Bitbucket → GitHub/Forge Application Migration
 - a. CCM-UI
 - b. CCM-BFF
 - c. Angular 13 Toolkit
 - d. Angular 20 Toolkit
 - e. React 19 Toolkit
6. CCM-UI Development & Maintenance
7. Common F5 → Application-Specific F5 Configuration
